Chains

PONSSE wheel chains

PONSSE chains are assembled manually and manufactured of high-quality materials with special emphasis on a uniform hardness and tensile strength. In addition, extensive testing and practical experiences have shown that PONSSE chains endure more wear, resulting in a longer service life.

TELLEFSDAL U-GRIP

The U-Grip chain has a unique structure, with a “U” stud welded under the flat-lying chain links. The studs on the vertical links together with the “U” studs guarantee the best grip on the market. The triple-diamond model also includes a very dense sideways protection.

OFA

OFA stands for the green chains, earlier known to quality conscientious users as Ovako chains. All traction chains are made from case hardened boron steel. The mounting and dismounting of OFA chains is a simple one-man operation. OFA chains offer excellent grip and good protection against external damage. OFA chains are available for all popular tire sizes.

MATTI W

Matti W Supertight pattern gives a good tire protection against external damage. Designed for heavy use and hard conditions, e.g. for scarifying work. Available in thicknesses of 13 mm, 16 mm and 19 mm, depending on the tyre size.

Matti W 16 2T - Diamond Pattern

3T

3ST

Matti W Double Diamond offers an excellent grip and a good wear-resistance. 13 mm, 16 mm or 19 mm.

Maximum grip for extreme conditions

New Matti W 16 and Paragon 16

New
Shaped
Chain Link!

With a bigger 19 mm stud and a new designed horizontal link the chains will give maximum grip with extended life.

TRYGG GIANT U-GRIP

TRYGG

Norwegian chain manufacturer since 1939.

TRYGG only use the highest quality steel from Western Europe.

The **TRYGG** team has always been dedicated to the development of the best possible tire chains for use within forestry, agriculture, construction and transport.

www.trygg.no

- **TRYGG GIANT U-GRIP** is a forestry chain with the ultimate combination of aggressive grip and smooth and efficient driving.
- The chains are made in 16 and 19 mm dimension with triple diamond pattern as standard.
- The U-studs are welded under the horizontal chain links to reduce wear of links and ensure good grip and long product lifetime. The studs are overdimensioned to provide an even better grip.
- The production process is sophisticated. The red hot chain mesh is soaked in carbon gas for hours to create a double steel. When quenched this process results in a unique material with super tough surface hardness and a normally hardened core. All together this ensure the market's highest life time expectancy.
- **TRYGG** chains are available for all popular tire sizes.
